PROFESSIONAL SUMMARY

DevOps Engineer with 6+ months of hands-on experience in automating cloud workflows across **Linux**, **AWS**, **Docker**, **Kubernetes**, **Terraform**, and **Git** environments. Skilled in architecting **multi-stage CI/CD pipelines** for **Java**, **Node.js**, and **Python** applications, alongside modular **Infrastructure as Code (IaC)** using **Terraform**. Proficient in crafting **language-specific Dockerfiles** for container optimization and implementing **progressive zero-downtime deployment strategies** on **Kubernetes** and **Amazon EKS** clusters. Active advocate for **DevSecOps** practices and cloud reliability, with foundational knowledge of **Microsoft Azure** and **GCP**.

EXPERIENCE

DevOps Engineer Intern | HisanLabs Private Limited

Jan 2026 - June 2026

- **Multi Tier CI/CD Pipeline Automation:** Architected automated zero downtime **Jenkins** pipelines triggered via **GitHub Webhooks** for multi language applications like Java Spring Boot, Node.js, and Python FastAPI, drastically accelerating developer feedback loops and release speed.
- **Git Version Control and Branching Strategy:** Mastered **Git** version control workflows, implementing structured branching strategies like **Gitflow** and Feature Branching alongside Pull Request checks, merge conflict resolution, and commit history management for reliable team collaboration.
- **AWS Enterprise Cloud Provisioning via Modular Terraform:** Authored modular Infrastructure as Code using core **Terraform** blocks like provider, resource, data, variable, output, and backend to provision enterprise grade AWS infrastructure across environments, configuring secure **VPCs**, public or private Subnets, Internet and NAT Gateways, fine grained Security Groups, **EC2** instances, and high availability storage via **EBS** and **EFS**.
- **Advanced Routing Identity & SSL:** Configured **Route 53** DNS routing policies, secure SSL or TLS termination using **AWS Certificate Manager**, and robust identity access boundaries using **IAM** roles, policies, and cross account permissions.
- **Scalable Traffic Balancing & Serverless:** Implemented **Application Load Balancers** backed by dynamic **Auto Scaling Groups** for traffic distribution, alongside cost efficient **AWS Lambda** serverless scripts for automated Snapshot Management and routine backups.
- **Deep Containerization and Compose Strategy:** Tailored multi stage multi architecture **Dockerfiles** for Java JVM optimization, Node, Python, and Go microservices. Managed complex container networking, Docker volumes for persistent storage, multi container orchestrations via **Docker Compose**, and efficient push or pull cycles to **Docker Hub** and **Amazon ECR**.
- **Kubernetes Orchestration & Helm Packaging:** Engineered deployment workflows on **Amazon EKS** by authoring **Kubernetes** manifest files like Deployments, Services, ConfigMaps, Secrets, and Ingress while packaging applications with **Helm Charts** for scalable cluster configuration.
- **Zero Downtime Deployment Strategies:** Applied progressive deployment methodologies, specifically **Rolling Updates** and **Blue Green Deployments**, to eliminate service interruption during production rollouts.
- **DevSecOps Security Gateways:** Embedded shift left security directly into build pipelines using **SonarQube** for continuous code analysis and **Trivy** for deep static container image and vulnerability scans.
- **Cloud Observability & Monitoring:** Formulated custom telemetry dashboards and alarm metrics using **AWS CloudWatch**, tracking cluster utilization, CPU or Memory spikes, and API latency for proactive incident response.
- **Linux Administration and System Management:** Managed distributed **Linux** server environments handling user and group administration, file permissions like **chmod** and **chown**, process monitoring, system health checks, log rotations, cron jobs, and custom **Bash** automation scripts.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, VPC, IAM, S3, EBS, EFS, ASG, ALB, Route 53, CloudFront, ACM, RDS, Lambda, CloudWatch, ECR, EKS, NAT/Internet Gateways, AWS CLI), Azure (Fundamentals), GCP (Fundamentals)

Containerization & Orchestration: Docker (Dockerfile, Compose, Networking, Volumes), Kubernetes (EKS, Helm, Ingress, Rolling Updates, Blue/Green Deployments)

CI/CD & GitOps: Jenkins, GitHub Actions, ArgoCD

Infrastructure as Code & Security: Terraform, Ansible, SonarQube, Trivy

Monitoring & Observability: AWS CloudWatch, Prometheus, Grafana, Datadog

Version Control: Git, GitHub

Scripting & Languages: Shell Scripting (Bash), Python

Databases: MySQL, MongoDB

PROJECTS

End-to-End Microservices CI/CD Platform on AWS EKS

- **Tech Stack:** Polyglot Microservices (Java, Node.js, Python, Go, React), AWS (VPC, EKS, ECR, IAM), Kubernetes, Terraform, Jenkins, Docker, Helm, ArgoCD, SonarQube, Trivy, CloudWatch, Prometheus, Grafana
- **Microservices Architecture Design:** Architected a multi service platform comprising **e-commerce-ui** in React.js, **user-service** in Java Spring Boot, **cart-service** in Node.js, **order-service** in Python, and high throughput **payment-service** in Go.
- **Automated Cloud Provisioning (IaC):** Authored modular **Terraform** configurations to provision multi AZ AWS infrastructure including custom **VPCs**, public and private Subnets, **EKS** cluster, Node Groups, **ECR** repositories, IAM roles, and fine grained Security Groups.
- **Optimized Multi Language Containerization:** Authored tailored multi stage **Dockerfiles** optimizing JVM parameters for Java, minimizing layer sizes for Node.js, Python, and React static builds, and creating ultra light distroless images for Go before pushing versioned artifacts to **Amazon ECR** and **Docker Hub**.
- **DevSecOps CI Pipeline Automation:** Built automated **Jenkins** pipelines triggered via GitHub Webhooks to run unit tests, perform static code analysis with **SonarQube**, and scan container images for vulnerabilities using **Trivy** prior to deployment.
- **Kubernetes Orchestration & Native Objects:** Managed production **Kubernetes** manifests on **Amazon EKS**, structuring core primitives including Deployments, Services, ConfigMaps, Secrets, and persistent volumes for stateless and stateful workloads.
- **GitOps Continuous Delivery & Helm Packaging:** Packaged Kubernetes application manifests into reusable **Helm Charts** and integrated **ArgoCD** for GitOps driven continuous synchronization, achieving zero downtime rollouts via **Rolling Updates** on the Kubernetes cluster.
- **Cluster Scaling, Traffic & Observability:** Configured NGINX Ingress Controllers, Kubernetes **Horizontal Pod Autoscalers (HPA)** for traffic spikes, and synthesized real time telemetry dashboards using **Prometheus**, **Grafana**, and **AWS CloudWatch**.

EduBlitz Medical B2B ERP System

- **Tech Stack:** Java Spring Boot 3.x, React 18, Vite, MongoDB, AWS (EKS, S3, CloudFront, Route 53, ACM, ALB), Terraform, Jenkins, Docker, Kubernetes, Helm, JWT, OpenAPI
- **Microservices Architecture Design:** Engineered a production grade medical ERP deployment setup with three decoupled Java Spring Boot microservices (User, Product, Order) and a React SPA frontend hosted on S3 with CloudFront CDN integration.
- **Cloud Infrastructure and Security Provisioning:** Authored modular Terraform code to provision secure AWS infrastructure including Route 53 DNS, CloudFront CDN, SSL certificate termination via ACM, AWS ALB Ingress Controller on EKS, public and private Subnets, and custom IAM roles.
- **Containerization and Kubernetes Deployment:** Tailored optimized Dockerfiles for all microservices and authored Kubernetes manifest files like Deployments, Services, ConfigMaps, and Secrets, while packaging application components into Helm Charts for streamlined EKS releases.
- **Zero Trust Security and API Gateway Routing:** Configured secure ingress routing policies and injected HMAC SHA256 JWT environment secrets into Kubernetes pods via K8s Secrets and ConfigMaps to enforce organization level role based access controls across service boundaries.
- **Database Deployment and High Availability Setup:** Provisioned highly available multi node MongoDB Atlas clusters, configured automated database backup lifecycle policies, dynamic connection pooling, and optimized multi tenant database connection strings across environments.
- **Automated CI/CD Pipeline Integration:** Built multi branch Jenkins automation pipelines for continuous integration, code quality verification, container image generation, and automated deployments to the EKS cluster.

EDUCATION

University Institute of Technology, RGPV

Bhopal, India

- Bachelor of Technology (B.Tech) – **CGPA: 7.63**

2022 – 2026

CERTIFICATIONS

-  **Web Development Internship** – YHills (2023)
